# Luis Felipe Volpato Alves

Staff Software Engineer · Technical Lead · AI Engineering

mail.for.luis.alves@gmail.com · (415) 272-9149 · SF Bay Area, USA · linkedin.com/in/luisfvalves · github.com/finxster · https://finx.dev

## SUMMARY

Staff Software Engineer with 21+ years of experience designing, building, and operating software across enterprise and startup environments. Specialized in backend systems, distributed architectures, enterprise integrations, and AI-enabled engineering practices. Over the last decade, I have led technical initiatives spanning microservices, data platforms, supply chain systems, financial applications, and developer productivity programs for Fortune 500 organizations. I regularly operate across architecture, implementation, mentoring, and cross-functional collaboration. Alongside enterprise work, I have founded and co-founded multiple ventures, including X4Fare, PayAqui, fleeber (now amy.network), and AtipicALI. I enjoy turning ambiguity into shipped products and helping teams deliver sustainable, scalable solutions.

## TECHNICAL SKILLS

**Backend:** Java (8–21), Spring Boot, Spring WebFlux, Kafka, Hibernate, Python, REST APIs, JMS, SOAP

**Frontend & Mobile:** React, TypeScript, JavaScript, Flutter, Swift (iOS), Android

**Cloud & Data:** AWS (EC2, RDS, SQS, S3), Databricks, PostgreSQL, Oracle, SQL Server

**DevOps & Tooling:** GitHub Actions, Jenkins, Bamboo, Maven, Gradle, Git, Liquibase, CI/CD

**AI & Engineering Practices:** AI / LLMs, Agentic AI, Prompt Engineering, AI-Assisted Development, GitHub Copilot, Codex, TDD/BDD, Scrum, Kanban

## PROFESSIONAL EXPERIENCE

### Magnite
Oct 2026 – Present

*Staff Software Engineer*

Remote

**Tech:**

### Avenue Code
2022 – 2026

*Staff Software Engineer · Tech Lead*

SF Bay Area, USA

- Lead technical initiatives across supply chain, logistics, data engineering, and AI programs for Fortune 500 retail organizations.
- Built the proof of concept for a strategic internal rules platform, helping leadership evaluate the replacement of a commercial solution and establishing a foundation for future AI-driven capabilities.
- Coordinated the migration of approximately 20 microservices from Java 11 to Java 21, defining technical standards, rollout guidelines, and adoption practices across multiple teams.
- Designed and implemented an engineering operations dashboard providing visibility into service health, deployment readiness, and environment availability across the organization.
- Contributed to the company's AI engineering initiatives through development workflows, prompting strategies, implementation standards, and engineering enablement practices.
- Developed data processing, simulation, and forecasting solutions using Python and Databricks for retail planning and supply-chain optimization.

**Tech:** Java, Spring Boot, Spring WebFlux, Python, Databricks, AWS, Kafka, Drools, SQL Server, Oracle, Jenkins, AI-assisted development

### X4Fare
2020 – 2021

*Founding Engineer*

São Paulo, Brazil — Remote

- Joined as one of the first engineers and helped build a transit fintech startup from concept to production.
- Delivered backend services, web applications, and mobile solutions supporting digital wallet and transaction processing products.
- Learned Flutter and became a key contributor to the mobile platform, accelerating delivery during the company's early growth stage.
- Participated in hiring, onboarding, mentoring, and technical decision-making as the engineering team expanded.
- Acted as a cross-functional technical reference across backend, mobile, operations, and product discussions.

**Tech:** Java, Spring Boot, Flutter, React, AWS, JHipster, Liquibase, GitHub Actions

### Avenue Code
2015 – 2020

*Senior Software Engineer · Tech Lead*

São Paulo, Brazil / USA

- SquareTrade: one of the first three engineers to start the account in Brazil — the work grew the team to 30+ people. Worked on Merchant Integrations (Apache Camel, Apache Zookeeper); acted as Tech Lead, Scrum Master, and 'Buddy' (managerial mentoring role).

- Merchant e-Solutions: traveled to Redwood City, CA to help the company achieve AMEX certification, working on-site.
- Williams Sonoma: built microservices on top of a Sterling application layer; helped the team build dashboards in pure JS/HTML plus Bash scripts.
- GAP · PIM / Data Governance: led and mentored the team on unit and integration tests for Kafka, replacing the product catalog (Pacman) with Stibo and publishing standardized data into a Kafka cluster; also served as Management Mentor.

**Tech:** Java, Spring Boot, Kafka, JMS, SOAP, Apache Camel, EJB, JUnit, Mockito, Gradle, Swagger, Bash, Jenkins, Oracle, SQL Server, PostgreSQL

### MAPS Soluções e Serviços
2005 – 2015

*Senior Software Engineer · Tech Lead*

São Paulo, Brazil

- Designed and implemented a tax calculation engine for investment fund liability management, a core business component that remains in production today.
- Led development of financial and regulatory solutions supporting banking and investment-fund operations.
- Worked directly with clients and business stakeholders to translate complex regulatory requirements into software solutions.
- Served in technical leadership roles across multiple projects, including engineering leadership, mentoring, backlog prioritization, delivery coordination, and architecture discussions.
- Mentored approximately twenty engineers throughout multiple projects and teams over a ten-year period.

**Tech:** Java, Spring, Hibernate, Oracle, PostgreSQL, AWS, Wicket, Maven, Jenkins

### Faculdade Cásper Líbero
2002 – 2005

*IT Intern*

São Paulo, Brazil

- Maintained the university's computer labs, supported students with technical issues, and automated administrative routines.

**Tech:** Bash Scripting, JavaScript

## ENTREPRENEURIAL EXPERIENCE

### AtipicALI
2025 – Present

*Co-founder*

Building a platform focused on helping neurodivergent individuals discover and evaluate services, places, and resources. Responsible for product architecture and implementation across backend, web, administration, and AI-assisted development workflows. Designing and operating the platform using Java, Spring Boot, Vue, Cloudflare, PostgreSQL, and modern AI-assisted engineering practices.

### PayAqui
2018 – 2019

*Founding Engineer · Mobile*

Founding engineer of a side payments venture. Designed and built the native Android and iOS apps end to end — from architecture to shipping — while also owning requirements discovery and UX, and contributing to the Java backend.

### fleeber (now amy.network)
2013 – 2015

*Co-founder*

Co-founded a social network for musicians with three applications (public app, back-office, and Studios ERP). Responsible for all technical decisions and most of the development, using a BDD approach, an Apache Lucene search engine, and AWS infrastructure. Continues today as amy.network.

## EDUCATION

### Bachelor in Computer Science
2002 – 2009

Pontifical Catholic University of São Paulo (PUC-SP)

## LANGUAGES

Portuguese (native/bilingual) · English (full professional proficiency)

## CERTIFICATIONS

- PSM — Professional Scrum Master, Scrum.org (2017)
- MCD — Integration & API Associate, MuleSoft (2018)
- KMP I — Kanban Management Professional, Kanban University (2015)
- Building High-Performing Teams, Stanford University (2020)
- An Introduction to Agile Project Management, Stanford University (2020)
- Swift & TDD/Unit tests, Managing projects with Scrum (Alura, 2015) · UX & Usability (Adaptworks, 2014)
